[1]:

The Jupyter Notebook Theme for Beamer

Notebook-style slides for technical talks

In [2]:
```
instructor = "[Your Name]"
```

Out[2]:
```
'[Affiliation] · October 24, 2026'
```

Jupyter Notebook theme by Priyansh Saxena · hi@priyanshsaxena.com

section 1

Getting started

[2]:

Using the theme

Load the theme and set your metadata in the preamble:

In [1]:

```
\documentclass[aspectratio=169]{beamer}
\usetheme{JupyterNotebook}
\title{...}  \author{...}  \institute{...}  \date{\today}
\notebookname{talk.ipynb}   % shown in the top bar
```

Then start the document with `\titleframe`. Compile with **XeLaTeX** twice, so the footer knows the slide count.

[3]: ## Options at a glance

Flags

Pass as `\usetheme[...]{JupyterNotebo`

`nosectionpages`, `noheader`, `nocredit`, `segments=16`

Special frames

`\titleframe` opens the talk. `\thanksframe{..}{..}` closes it.
Section slides appear for every `\section`.

[*]:

section 2

Cells

[4]:

Input and output cells

In [3]:

```
def fibonacci(n):
    """Return the n-th Fibonacci number."""
    a, b = 0, 1
    for _ in range(n):
        a, b = b, a + b
    return a

fibonacci(10)
```

Out[3]:

55

incell needs a [fragile] frame; outcell takes any content.

[5]:

Markdown and code cells

[4]:

A **markdown cell** is drawn as the selected cell, with a blue bar. Use it for definitions, key equations or the one idea of the slide.

In [5]:

```
model.fit(X, y)   # codecell: code look, no verbatim
```

In [6]:

```
\begin{mdcell}{4} ... \end{mdcell}
\begin{codecell}{5} ... \end{codecell}
```

[*]:

section 3

Text and maths

[6]: ## Lists

- Items get a snake-segment bullet
  - Sub-items get a single square
- Alerted text is orange
- Inline pills: `(64, 128)`

1. Enumerate uses orange numbers
2. Keep bullets short
3. One idea per slide

[7]:

Mathematics

[8]:

$$\int_a^b f(x)\,dx \;\approx\; \frac{h}{2}\Big[f(x_0) + 2\sum_{i=1}^{n-1} f(x_i) + f(x_n)\Big]$$

Note

Maths stays in Computer Modern, which pairs well with the sans body text.

[*]:

section 4

Blocks and overlays

[8]: ## Blocks

block

Beamer's own block, restyled as a cell.

alertblock

Orange, for warnings and pitfalls.

exampleblock

Green, for examples and tips.

[9]: ## Overlays work as usual

- First this

[9]: ## Overlays work as usual

- First this
- Then this

[9]: ## Overlays work as usual

- First this
- Then this
- And finally this

[*]:

section 5

Tables and figures

[10]:

A table as cell output

In [12]:

```
df.groupby("config")[["time", "memory"]].mean()
```

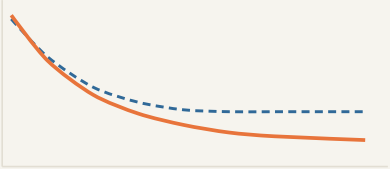

Out[12]:

config	time (s)	memory (MB)	speed-up
small	31.3	457	2.8
medium	52.6	946	2.8
large	118.4	2505	3.6

Sample numbers for illustration.

[11]: ## A figure next to text

- Left column carries the story
- Right column holds the figure
- Use `onlytextwidth` so columns stay inside the margins

Sample curves: train and validation loss

[*]:

section 6

Closing

[12]: ## Summary

1. Paper background, Python blue and Jupyter orange
2. Inter for text, IBM Plex Mono for code and prompts
3. Cells: `incell`, `outcell`, `mdcell`, `codecell`, `texcell`
4. Special frames: `\titleframe`, `\thanksframe`
5. A pixel python that grows in the footer as the talk goes on
