02 Windows and code

03 Text and maths

04 Blocks and overlays

05 Tables and figures

06 Closing

section_01

> Getting started

> Using the theme

Load the theme and set your metadata in the preamble:

preamble.tex

```
\documentclass[aspectratio=169]{beamer}
\usetheme{NeonTerminal}
\title{...}  \author{...}  \institute{...}  \date{\today}
\windowtitle{~/talk -- zsh}        % title-page window
\promptline{~/slides}{make talk}   % title-page prompt
```

Then start the document with `\titleframe`. Compile with **XeLaTeX** twice, so the footer knows the slide count.

> Options at a glance

flags

Pass as `\usetheme[...]{NeonTerminal}`:

`nosectionpages`, `nocredit`, `segments=16`

special frames

`\titleframe` opens the talk. `\thanksframe{..}{..}` closes it. Section slides appear for every `\section`.

section_02

> Windows and code

> Code in a terminal window

fib.py

```
def fibonacci(n):
    """n-th Fibonacci number."""
    a, b = 0, 1
    for _ in range(n):
        a, b = b, a + b
    return a

print(fibonacci(10))   # 55
```

- `terminal`: Python with colours
- `shell`: commands and output
- `texwindow`: LaTeX source

```
// code windows need a [fragile] frame
```

~/talk $ cat setup.sh

> Shell sessions and plain windows

zsh

```
$ python -m venv .venv && source .venv/bin/activate
$ pip install numpy pandas matplotlib
# lines starting with # are comments
```

notes.md

`termwindow` holds any content: text, maths, tables or images.

section_03

> Text and maths

> Lists

- Items get a snake-segment bullet
  - Sub-items get a single square
- Alerted text is pink
- Inline pills: `[64, 128]`
- Colours: cyan, pink, lime, amber

1. Enumerate uses brackets
2. Like option flags
3. Keep bullets short

~/talk $ cat maths.md

> Mathematics

maths.md

$$\int_a^b f(x)\,dx \;\approx\; \frac{h}{2}\Big[f(x_0) + 2\sum_{i=1}^{n-1} f(x_i) + f(x_n)\Big]$$

note

Maths stays in Computer Modern, which pairs well with the mono titles.

section_04

> Blocks and overlays

~/talk $ cat blocks.md

> Blocks

block

Beamer's own block, restyled as a panel.

alertblock

Pink, for warnings and pitfalls.

exampleblock

Lime, for examples and tips.

~/talk $ run --step

> Overlays work as usual

- First this

~/talk $ run --step

> Overlays work as usual

- First this
- Then this

~/talk $ run --step

> Overlays work as usual

- First this
- Then this
- And finally this

section_05

> Tables and figures

~/talk $ cat results.csv

> A table

results.csv

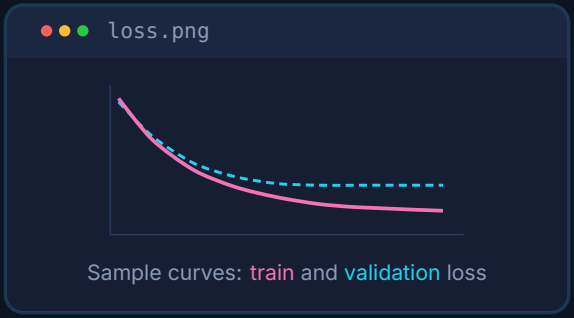

config	time (s)	memory (MB)	speed-up
small	31.3	457	2.8
medium	52.6	946	2.8
large	118.4	2505	3.6

Sample numbers for illustration.

~/talk $ python plot.py

>A figure next to text

- Left column carries the story
- Right column holds the figure
- Use `onlytextwidth` so columns stay inside the margins

section_06

> Closing

> Summary

[1] Deep navy with cyan, pink and lime accents
[2] Inter for text, JetBrains Mono for code and titles
[3] Windows: `terminal`, `shell`, `texwindow`, `termwindow`
[4] Special frames: `\titleframe`, `\thanksframe`
[5] A pixel python that grows in the footer as the talk goes on

$ exit
